### Stars Are Beginning to Align for an Improved Retail Landscape in 2021

The COVID-19 pandemic has wreaked havoc throughout the world, impacting many industries including commercial real estate. In Q4 2020, U.S. shopping center net absorption totaled -2.7 million square feet (msf), with 46 of the 84 markets tracked by Cushman & Wakefield reporting negative net absorption. Throughout 2020, a total of -26.0 msf came back to the market, the largest annual decline in occupancy ever recorded. This pushed the national shopping center vacancy rate up 10 basis points (bps) from 7.1% in Q3 to 7.2% in Q4 2020. Year-over-year (YoY), retail vacancy increased 80 bps from the 6.4% reported in Q4 2019. The Northeast region of the U.S. saw the largest increase in vacancy both quarter-over-quarter (QoQ) and YOY coming in at 7.2% in Q4 2020. Rental rates saw a very minor increase from Q3 2020 and remained nearly flat YoY at \$20.91 per square foot (psf) at the end of 2020. The South region of the U.S. saw a slight increase QoQ coming in at \$20.41 psf while the other three regions saw slight declines in rental rates. Despite the aggressive decline in absorption, the increase in vacancy rates, and the slight decline in rents, 2021 will see marked improvement in the sector, especially in the second half of the year.

The pace of vaccinations and path of the virus is central to the retail trajectory. The first few months of 2021 have been challenging, but there is light at the end of the tunnel. With the successful rollout of vaccines, the pandemic is likely to come to an end this year (or at least become far less threatening). Most assume roughly one-third of the U.S. population will have been vaccinated (or will have achieved some form of immunity) by April, 60% by June, and full herd immunity achieved by September/October of this year.

As a result, the economic outlook has been revised upward for 2021. In particular, the stars are beginning to align for a robust second half. The savings rate—currently hovering at 14% (the norm is 5%)—points to a scenario where strong pent up consumer spending is unleashed. Higher-income households—feeling particularly wealthy given the run up in the stock market and home values—are positioned well to drive robust consumer spending for certain sectors (e.g., restaurants, luxury, domestic travel and tourism).

## U.S. NATIONAL

## Shopping Center Q4 2020

Moreover, borrowing costs are likely to remain low as the Fed is intent on keeping rates down until the economy nears full employment (at least one to two years away), which will keep housing, auto, and credit-related spending strong.

Additionally, COVID-19 has amplified the importance of having an online presence with e-commerce expanding by leaps and bounds. Be it pure online, curbside, or BOPIS (buy online, pick up in store), the shift to e-commerce during the pandemic was especially apparent during Q4 2020. Digital sales in November through December rose 45.2%--more than triple the YoY rate for the prior season—with more than \$1 in \$4 spent online. E-commerce sales at year-end 2020 accounted for 19% of total retail sales in the U.S., compared to 15% at the end of 2019 before the pandemic hit the United States. We will likely continue to see some consumers shift some of their traditional shopping practices from brick-and-mortar to e-commerce throughout 2021 and even in 2022. Convenience is a huge factor to the average consumer, but it can't always replace the benefits of visiting a traditional retail location.

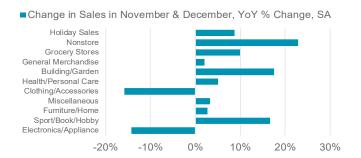

Downtown retail, for example, is poised to experience at least some improvement in the back half of 2021. As the vaccine becomes more widely distributed, a gradual return to the office is expected. In turn, this means retail markets will see millions of workers going out to lunch again. participating in happy hours, and shopping around their place of work. Once the return to work happens, new life will be breathed into the retail sector.

The recovery of the retail market is still in its early days but the role of strong retail in anchoring destination and convenience locations is clear and repricing will open opportunities in 2021.

### Outlook

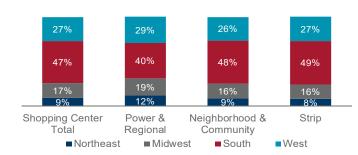

- Shopping center performance will remain highly dependent on tenant mix with wide variations by type and location, but expect overall net absorption to be sluggish in H1 2021 with improvement in H2 2021.
- Bankruptcies and strategic closures will remain elevated, placing upward pressure on vacancy and downward pressure on rents.
- The flight to quality by tenants is expected to continue. Shuttered locations will provide retailers an opportunity to seek better locations and tenants will look to take advantage of market conditions to lease higher-quality space.
- Adaptive reuse and conversions will be in consideration in the coming years. These have the potential to see department stores repurposed into multi-family units or hotels.

CUSHMAN & WAKEFIELD

Our statistical coverage includes community/neighborhood, power/regional, and strip centers. It does not include malls, outlet centers, theme retail centers, airport retail or freestanding retail product.

#### Methodolgy

Cushman & Wakefield's quarterly estimates are derived from a variety of data sources, including our own proprietary database as well as data from reliable third-party data sources. The market statistics are calculated from a base shopping center inventory comprised of properties deemed ot be competitive in the respective local market. The inventory is subject to revisions due to resampling. Vacant space is defined as space that is available immediately or imminently after the end of the quarter. The figures provided for the current quarter are preliminary and all information contained in this report is subject to correction of errors and revisions based on the receipt of additional pertinent data.
